

CARE: Consolidated Asset Risk Evaluation

Turn Asset Complexity Into Clarity.

Unlock cost-efficient cybersecurity and IT asset visibility.

Why CARE?

Business Challenges Solved

Legacy security assessments miss what puts you at risk: shadow assets, SaaS tool sprawl, IT/OT blind spots, and dormant exposures. CARE delivers instant, agentless, and automated asset intelligence, with actionable results in days, not weeks.

What Makes CARE Different?

Agentless, Zero-Disruption Discovery:

No installs. Read-only, API-driven scans map your true attack surface, on-prem, cloud, and SaaS.

Automated Correlation:

Uncovers redundancies, unmanaged hardware/software, and shadow IT with near-100% accuracy.

Real-Time Insights:

Dashboards and reports update live, not months after manual reviews.

Full-Spectrum Visibility

Map every asset across
HW, SW, firmware

Actionable Insights

Spot rogue, obsolete,
unmanaged assets
instantly

Risk-Based Remediation

Prioritized, costed
action plans

Tool Rationalization

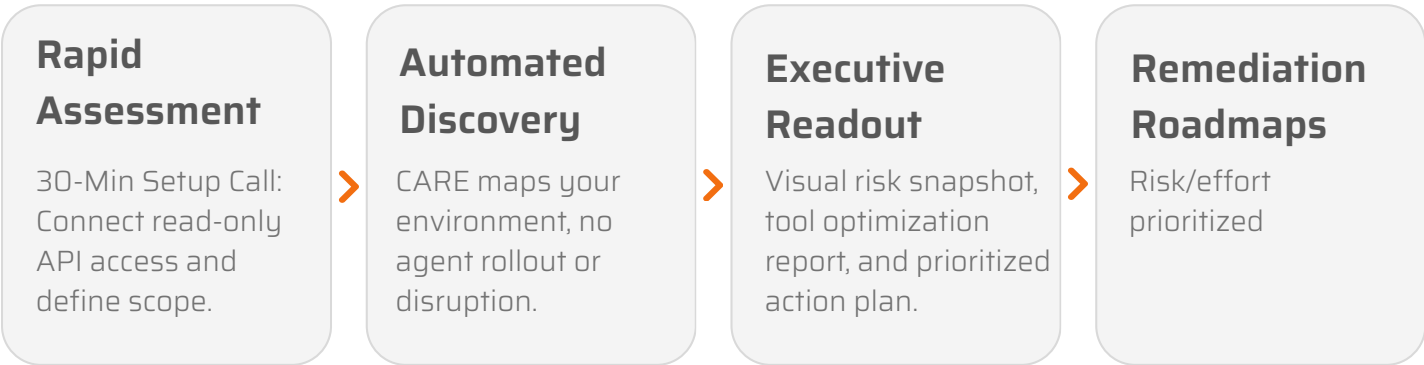

Slash costs by removing duplicates

Regulatory Alignment

Stay audit- and SLA-ready

How It Works

A Clear Path From Assessment to Action

All data is secured and remains in your environment or is purged after delivery.

What You Get

Action-ready, board-level readout	Comprehensive risk + asset inventory (real-time, de-duped, enriched)
Prioritized remediation plan + risk register “Before & After” visual dashboard	Redundant vendor analysis & rationalization report

Packaged For Your Scale

Org Size	Assets Supported	CARE Engagement
Small	up to 5,000	2-3 months
Medium	up to 50,000	3-4months
Enterprise	50,000+	Custom

Outcomes You Can Measure
